Infrared temperature switches – switching and analog outputs. . . . .	200 - 201

## Top five product features!

- Simple setup with rotating adjustment dials that quickly establish setpoint and resetpoint
- Space-saving design with no moving parts that can wear or break
- Bright LEDs indicate switching status and power
- Fast response times (less than 3 seconds)
- One TK switch replaces two mechanical switches

### Compact temperature sensor with 316 stainless steel probe

The compact TK Series temperature switch and its integrated 316 stainless steel RTD probe measure only 4" long and can be directly mounted into a pipe.

Two mechanical setup dials rotate to quickly establish the setpoint and resetpoint temperatures. The switch's high accuracy insures that the setpoint does not drift and calibration is not required. Two bright LEDs indicate switching and operating status.

With no moving parts to stick in the process or break, the ifm TK Series switch maintains high performance and long term stability. A locking device prevents unintentional setpoint changes.

**NEW!** Part No. TK7480 has been added to the offering. It features a 255 mm probe length, two switching outputs and a G 1/2 BSPP connection.

ifm's TK temperature sensor is a new benchmark for price / performance value.

### Quick setup! Rotating setup dials establish parameters

TK temperature switches feature mechanical adjustment dials that rotate to quickly establish the setpoint and resetpoint.

## Top five product features!

- Integrated solution: RTD, display and switching/transmitter output
- One-piece solution is ideal for small pipe mounting
- Stainless steel wetted parts and simple pushbutton setup
- Compatible with wide range of chemicals
- Very fast response on temperature changes (less than 3 seconds)

### Enclosure free, local mounting

ifm's compact TN Series process temperature sensors provide highly accurate temperature indication of fluids. The sensors are self-contained units that feature an integrated control monitor and probe. The sensor's robust stainless steel probe is resistant to aggressive media, withstands shock and vibration and features a rotatable display for system temperature.

These models simplify installation in small pipes where local indication is needed. The monitor's integrated display allows a user to view temperature directly at the process. The robust, stainless steel housing with-

stands harsh conditions and is mounted without the need for an enclosure or control box. With its flexible design, the temperature monitoring system adapts to most applications.

### Pushbutton programming

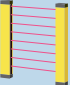

Using the monitor's microprocessor-based pushbutton setup, users can toggle through a variety of menu items. Two output options are available: models with scaleable analog and switching outputs, and models with dual PNP / NPN outputs. The switching output has an independent setpoint and reset-point that can be programmed as normally open or normally closed.

### Versatile mounting

A rotatable display allows the process temperature to be viewed from any angle.

## Top five product features!

- 2-wire loop power installation
- Fast response time:  $T_{05} / T_{09} = 1/3$  sec
- LED indicates the operating status
- Installation lengths from 25...150 mm
- Popular pre-scaled ranges available or IO-Link programmable

## Compact one-piece design, fast response temperature transmitters

ifm's new line of transmitters offer an ideal combination of features, performance and value.

### Compact and versatile

The TA2 temperature sensor is a compact transmitter with a 4...20 mA current output and a prescaled 0...300 °F measuring range. Scaling over the -58...302 °F range is done simply via the integrated IO-Link interface.

The bright LED indicator located in the M12 connector gives visible indication of operational status.

### Ready to install

Pre-programmed and ready for use, the one-piece design with integrated electronics, 6 mm diameter probe and threaded process connectors makes ordering easy with a single part number.

### Fast and precise

The TA2 transmitters use a high accuracy Pt1000 class A RTD with a low mass tip design for fast response.

Integrated electronics and factory calibration ensure a reliable ready-to-use transmitter for monitoring temperature in industrial automation applications.

Fluid temperatures are critical measurements in process applications. The TA2 transmitter is ideal for monitoring their process fluids.

## Top five product features!

- Transmitter provides long-term, highly accurate temperature indication in a variety of industrial automation applications
- The 2-wire loop powered transmitter is fully programmable and comes pre-scaled in a variety of ranges
- One-piece housing features integrated electronics, process connector and Class "A" RTD probe that are laser-welded and factory calibrated
- Bright, 4-digit LED display indicates measured temperature directly at the instrument for easy verification of proper operation
- 316 stainless steel housing is robust for harsh industrial applications

## TD temperature transmitters are completely assembled, calibrated and ready to install

**NEW!** The TD Series temperature transmitters monitor the temperature of liquids in industrial automation applications. The one-piece housing is made of durable 316 stainless steel to withstand tough environments. The 2-wire loop powered programmable transmitter is pre-scaled for the most common ranges. A bright, 4-digit LED display is protected with a high performance polymer display window that is resistant to chemicals and high temperatures.

Temperature measurement uses high accuracy Pt1000 class A RTDs (resistive thermal detector). Evaluation electronics are optimized for accuracy over the full working range and calibrated to within 0.5 °F.

The highly engineered tip design reduces thermal mass and precisely locates the RTD element with a constant position and force. The benefit of the tip design is very fast reaction speeds of 1 second to 50% and 3 seconds to 90% of the temperature change. There is no calibration or matching of the RTD with the transmitter module.

The TD comes fully assembled and factory calibrated for the highest degree of reliability. This saves both installation and commissioning time.

### Challenge

Traditional sensors require costly calibration and matching of the transmitter with the RTD probe. The assemblies do not have displays for local indication. The connection head and well assemblies are prone to damage from moisture ingress.

### Solution

The Pt1000 sensor element, evaluation electronics and LED display are calibrated to operate as a system solution for your process monitoring.

The one-piece device eliminates wiring issues and moisture ingress.

### One-piece solution mounts directly in process

The TD temperature transmitter reliably monitors the fluid temperature in many industrial applications.

Process and compression fittings attach to the RTD probe to provide a secure connection in the process.

Optional thermowell mounting allows the sensor to be removed without stopping process.

A compression fitting and nylon ferrule are required for thermowell mounting.

## Top five product features!

- Compact size with "Lock in Place" M12 connectors
- Plug-and-play connection eliminates wiring errors
- Scaleable and offsetable Pt100 / Pt1000 evaluation with temperature ranges from -58... 572 °F (-50... 300 °C)
- Integrated LED confirms operating status
- Over-molding technology guarantees integrity in harsh environments

## Turns any RTD into a programmable 4...20 mA temperature transmitter

The innovative TP transmitter module with "plug and play" M12 connectors solves the common installation and environmental problems associated with conventional terminal chamber-head transmitters.

Error sources from screw terminals, wiring mistakes, and fluid ingress are eliminated. An integrated LED gives local indication that the transmitter is powered and transmitting.

### Challenge

Bulky traditional head transmitters are costly and are subject to moisture ingress.

### Solution

ifm's compact TP transmitter is rated to withstand liquid ingress and provide reliable temperature indication

### Completely configurable

Compatible with any Pt100 or Pt1000 probe, the TP temperature module verifies the type of RTD and automatically makes the correct settings. Usable with 2, 3, or 4-wire RTDs, the TP can be scaled and offset using ifm's USB interface. With its "overmolded" construction, the TP is suitable for harsh environments allowing for use in almost any application.

## Top five product features!

- Integrated display with switching and transmitter outputs
- Easy direct mounting in tanks
- Display can be remotely mounted with simple 4-wire patchcord
- Enclosure-free housing eliminates problems with moisture ingress
- Directly interfaces with any 2, 3, and 4 wire RTDs

## More compact and easier to install than head-and-well assemblies

The TR Series process temperature monitors provide highly accurate temperature indication of fluids. The monitor's integrated display allows a user to view temperature directly at the process. The robust, stainless steel housing withstands harsh conditions. Programmable in either °F or °C, the highly-visible display can be viewed from a distance which is advantageous in low-lit areas.

### Challenge

Bulky head-and-well assemblies with open cavities are subject to liquid ingress and do not have localized displays.

### Solution

ifm's zero-leak, compact temperature monitor connects to a variety of RTDs and features local numeric display.

### Two monitors available:

- Model TR2432 provides a scaleable analog and switching output.
- Model TR7432 features a dual switching output.
- Both monitors have a temperature range of -40 to 572 °F and interface with 2-, 3- and 4-wire RTDs (Pt 100 or Pt 1000). The compact monitors feature a 4-digit numeric LED display that indicates temperature in 0.1 °F resolution.

## Top five product features!

- A variety of RTD probe lengths offer a wide range of insertion depths
- Various thermowells are available that allow the probe to be removed without shutting down the process
- 316 stainless steel design detect rapid temperature changes and is compatible with a wide range of chemicals
- For a custom temperature monitoring system, RTDs can be used with or without ifm's TR control monitor or TP transmitter module
- Standard M12 connectors allow for a multitude of mounting options

### ifm's modular temperature components allow flexibility in any application

Select an RTD probe and process fitting that will suit your application. Optional thermowells allow the RTD probe to be removed without stopping the process.

#### A Select an RTD probe

ifm stainless steel temperature probes are available in 6 mm, 8.2 mm and 10 mm diameters. Probes are available in varying lengths to suit a wide range of installation depths.

#### B Select a process / compression fitting

Process and compression fittings attach to the probe to provide a secure connection in the process.

Models are available in 1/4", 1/2", 3/4" and 1" NPT, G 1/4 and G 1/2 BSPP and weldable adapters.

#### C If needed, select a thermowell

Optional thermowell mounting allows the RTD probe to be removed without stopping process.

Thermowells are available in various diameter options and lengths.

## Top five product features!

- *Reliable part-presence detection of hot objects up to 2900 °F (1600 °C) using non-contact long-distance sensing technology*
- *30 mm threaded stainless steel housing designed for harsh environments*
- *Scratch-resistant, optically coated precision lens for minimum sensitivity to scattered light ensures reliability*
- *Easy setup via pushbutton and display on the sensor*
- *Analog / switching or dual switching outputs are available*

## Compact infrared temperature sensor for detecting objects with temperatures up to 2900 °F

**NEW!** Many industries involve detection of objects that are too hot for the use of standard position sensors, such as in the manufacturing of asphalt, steel, glass, or ceramic products. ifm's TW Series non-contact infrared temperature switch is designed to detect objects ranging in temperature from 32 to 2900 °F (0 to 1600 °C).

The TW sensor solves these applications by detecting the infrared radiation emitted by the object and converting it into an output signal. The TW2 sensor provides an accurate temperature measurement based on the target emissivity.

### High precision in a robust housing

ifm's TW temperature series features a compact robust housing. The integrated scratch-resistant precision quartz lens with anti-reflective coating provides minimum sensitivity to scattered light for reliability in extremely harsh environments.

The TW is available with an M12 Micro quick disconnect connector. For mounting restrictions with limited space, fiber optic units are available. A special lens attachment is required in this case.

### Easy setup

Outputs can easily be set using the pushbuttons and digital display of the sensor.

The TW Series temperature sensor can be used to detect a hot steel slab by measuring the infrared radiation intensity emitted from the hot slab.

The TW2 transmitter displays actual temperature of the hot slab and provides a corresponding analog signal.

The TW7 switch displays a percentage of the infrared radiation intensity and provides a switchpoint set by the user.

### Accessories

Type	Description	Part No.	List Price (1-pc.)
	Air purge	<b>E35063</b>	<b>\$119.00</b>
	Cooling jacket	<b>E35064</b>	<b>\$270.00</b>
	Mounting bracket	<b>E35065</b>	<b>\$55.00</b>
	Protective tube	<b>E35066</b>	<b>\$82.00</b>
	Heat isolator	<b>E35067</b>	<b>\$45.00</b>

### Required Accessories TW2011/TW7011

Description	Part No.	List Price (1-pc.)
Fiber optic cable, 2 m	<b>E35061</b>	<b>\$265.00</b>
Fiber optic cable, 5 m	<b>E35062</b>	<b>\$320.00</b>
Sensor head, lens attachment for IR temperature sensors	<b>E35060</b>	<b>\$275.00</b>

### Cordsets

Type	Description	Part No.	List Price (1-pc.)
	M12 Micro DC (5 pin) 10 m, PUR, shielded	<b>EVC546</b>	<b>\$45.00</b>
	M12 Micro DC (5 pin) 10 m, PUR, shielded	<b>EVC549</b>	<b>\$45.00</b>

### Technical Specs

Supply voltage: TW2: 18...32 V DC; TW7: 10...34 V DC  
 Current rating: 150 mA per switching output  
 Ambient temperature: TW: 32...140 °F (0...60 °C)  
 E35060: -4...480 °F (-20...250 °C)  
 Protection rating: IP65

### Reliable service center

The ifm service center team provides tech support, product quotes, delivery information and order placement.

- Place orders, tech support 800-441-8246
- Visit our product catalog [www.ifm.com/us](http://www.ifm.com/us)
- Shop for products online Easy ordering via eShop
